MONORAIL CONVEYING SYSTEM FROM MONTECH

Montrac is an intelligent conveyor system for manufacturing and logistical processes. Montrac systems are flexible, simple and user-friendly; the possibilities are nearly limitless. Montrac has been optimizing production processes and intralogistics in innovative companies worldwide for over a decade. Wherever customers have to move multiple products, Montrac is an efficient and profitable solution.

INTRALOGISTIC With a very small space with a tested reliability of 99.97% and the possibility of chaotic inventory management at a speed of 30 m/min, it is hardly surprising that Montrac is one of the most popular and efficient logistics workers. The Montrac intralogistics solution guarantees that products are moving to the right point at the right time with the best quality.

CAR LIGHTING The world's most reputable manufacturers of headlamps rely on Montrac in their logistics and production processes. Thanks to chaos technology and the antistatic properties of Montrac, various innovators have been able to recapture their initial investment of the conveying system within a very short time.

CLUSTER The possibility of turning traveling time into production time, by Montrac testing the electrical functions during travel, creates a unique selling proposition for our conveying system in this sector. The unique flexibility of this intelligent conveying system and the possibility of chaotic manufacturing are the characteristics that enable Montrac to convince the decision makers in this sector.

CLEANROOM Montrac is perfectly suited for cleanrooms. The shuttles are self-propelled and therefore have no dirty belts, in contrast to a conventional conveyor system. There is no sliding friction to create particulate. Even its aerodynamic form reduces air turbulence. With its ergonomic form and complete equipment with purely electronic components, Montrac is ideal for clean rooms.
