MOUNTING SYSTEM QUICK-SET

Quick-Set is a mounting system with cross-product compatibility and flexibility. Its' proven dovetail fastening system permits rapid, uncomplicated assembly of all Montech products.

MODULARITY Quick-Set is a universal modular system for mounting elements. A variety of mounting options can be obtained with a minimum of individual elements (10 base elements). The system makes it possible for fast installation without machining the profile ends. All the clamping screws of the mounting elements are always accessible. It is simple to disassemble and reuse the mounting elements at any time.

QUALITY Quick-Set is suitable for precise dimensionally-stable connections. Its' dovetail connections can be subjected to larger loads than T-slot connections. With the screws tightened to the correct torque, the strength of the resistance to displacement between two interconnected profiles is 3000 N. Quick-Set-connections are vibration proof and highly suitable for demanding applications.

TRANSFORMATION ABILITY Quick-Set makes it possible to set up linear connections as well as connections with adjustable angles. Its excellent flexibility makes it easy to reinforce mounting elements (vertical supports, horizontal carriers/diagonal braces). Quick-Set can be adjusted easily, quickly and precisely, without the need for drilling or pinning.

VERSATILITY The possibilities of setting Quick-Set are almost unlimited. Near purely technical applications in automation industry, Quick-Set is capable also for universal usability like tables, shelves etc. Free spaces can be set up for individual adjustments.
